D30® PROTECTION AND REDUCTION OF LOAD PEAKS TRANSMITTED TO THE JOINTS

METATARSAL INNOVATION PROTECTION

COMFORT AND PROTECTION AT THE SAME TIME

D30®

Nothing protects better than D30®

D30® absorbs and dissipates energy while walking and on impact, reducing the amount of force transmitted to the body, compared to standard foams.

**ANVERSA
45527-00L**

01. D30® is integrated in the shoe and protects the metatarsal

This is a specially shaped product designed to protect the midfoot. METATARSAL PROTECTION is an insert in D30 that is positioned in the instep area of the shoe.

02. A resistant and light shield, you can't feel it, you can't see it

This shock-absorbing insert protects the midfoot area from injuries caused by falling objects or impacts. It is lightweight, flexible, keeps its shape well and is comfortable to wear.

03. Absorbs and dissipates energy during the day.

Reduces load peaks on the heel with an absorption of 300N.

04. Excellent flexibility and wide foot movements

Because it is integrated directly in the shaft of the shoe, the design is even more slimline and inconspicuous than before. In addition, the product's special shape, flexibility and soft fabric top make it suitable for different types of feet.

04.
